

COLOR INTENSITY

VERO K-PAK COLOR

PRELIGHTEN: ISO i.Color Active Lift Powder Lightener + 40-volume developer. Lighten client to a level 8-9,

Light Blonde.

FORMULA 1 (MINT): Using Clear as a base, add Peacock Green one tiny bead at a time until you achieve a pale mint/sea foam green.

FORMULA 2 (LIME): Using Yellow as a base, add a pea-size amount of Peacock Green to achieve a fluorescent lime shade (adding more Peacock Green for desired intensity).

FORMULA 3 (TEAL): Equal parts Clear and Yellow, plus one ribbon of Peacock Green and one ribbon of Cobalt Blue.

FORMULA 4: Yellow (undiluted)

APPLICATION: The application pattern used is a technique that typically calls for 4-5 color formulas. Starting at the nape, take 1-inch sections and apply one of the formulas from roots to mid-lengths, same with another section using another formula, and continuing until you reach the front hairline. Wipe your gloves very well in between every formula change, because color is applied to the sections with the brush and with your hands - no foils. Then, start back from the nape again applying alternate formulas mid-length to ends, wiping your gloves again between all formula changes and making sure to fully saturate and melt the color where one formula meets another on each particular section. This technique moves fast, doesn't require any foil and produces a beautiful "Chameleon" color effect - every way you move the hair, you have a melted color effect where nothing harshly stops or starts. It's a very subtle way to use very bold colors, for a very pretty watercolor effect.
